

MARWAN MOSTAFA KARAM ELMALLA

DATA ANALYST

Turning complex data into clear dashboards, reliable KPIs, and actionable business insights.

About Me

I am a detail-oriented Data Analyst with a strong background in data modeling, SQL query optimization, and Business Intelligence solutions. I work with Power BI, Microsoft Fabric, Microsoft Excel, SQL, and Python to transform complex datasets into useful business insights. My focus is on data quality, KPI validation, clear reporting, and building dashboards that support stakeholder decision-making.

My Value Proposition

I help businesses turn complex data into clear, reliable insights through data cleaning, SQL analysis, interactive dashboards, and KPI-focused reporting.

What I Bring

Data Preparation Cleaning, transforming, validating, and structuring datasets for analysis.	Business Intelligence Interactive Power BI dashboards, KPI reporting, and business trend analysis.
SQL & Data Modeling Relational schemas and efficient queries for extraction, validation, and reporting.	Python Analytics Pandas and NumPy for data cleansing, transformation, and analytical workflows.

Skills & Services

Business Intelligence & Dashboards

Power BI • Microsoft Fabric • Microsoft Excel • Advanced Formulas • Pivot Tables • Data Cleaning

Data Extraction & Modeling

SQL (MySQL) • Relational Database Schemas • Data Validation • KPI Definition • Basic Data Modeling

Data Transformation & Scripting

Python • Pandas • NumPy • Data Cleansing & Transformation

Developer Tools

Git / GitHub • Visual Studio Code

Services I Can Provide

01

Dashboard Development

Design interactive Power BI dashboards that communicate trends, KPIs, and business performance.

02

Data Cleaning & Transformation

Prepare messy datasets for analysis using Excel, SQL, Python, and transformation workflows.

03

SQL Analysis

Extract, validate, and analyze relational data using structured SQL queries.

04

KPI & Business Reporting

Define and validate core business metrics and convert analysis into decision-ready reports.

Experience & Education

Data Analysis Trainee | Digital Egypt Pioneers Initiative (DEPI)

- Designed dynamic Power BI dashboards to visualize business trends and deliver actionable insights for key decision-makers.
- Prepared, transformed, and structured complex business datasets using SQL and Python to resolve data quality issues.
- Formulated and validated core business metrics and KPIs in collaboration with project mentors to ensure accurate reporting.
- Applied basic data modeling principles using Microsoft Fabric and relational database platforms.

Education

Faculty of Computers and Information — Bachelor of Science in Computer Science & Information Technology

Expected Graduation: 2029

Relevant Coursework: Database Management Systems (SQL), Data Analysis, Information Systems, Programming Fundamentals (Python/C++), Data Structures & Algorithms.

Languages

Arabic	Native
English	Professional Working Proficiency

Featured Project

Banking Customer Insights & KPI Analytics Dashboard

A data analytics project focused on financial performance, profitability metrics, customer trends, data validation, and interactive business reporting.

Scope	Financial performance data covering 2020–2025
Data Work	Relational dataset schemas, SQL extraction, cleaning, and validation
Reporting	Interactive Power BI reporting solution with customer insights
Outcome	Clearer visibility into profitability metrics and customer trends for strategic decision-making

Key Contributions

- Processed and analyzed financial performance data to track profitability and customer trends.
- Constructed relational dataset schemas and executed advanced SQL queries to clean, extract, and validate raw data.
- Developed an interactive Power BI reporting solution incorporating customer insights.

Other Projects

Database Management System Optimization

- Engineered relational database models applying strict normalization techniques to streamline data storage.
- Wrote efficient SQL queries to minimize data retrieval latency and ensure data integrity across multiple datasets.

Excel Sales & Profitability Dashboard

A practical Excel data-analysis project built around the Superstore dataset, using Power Query and Pivot Tables to clean data, analyze sales and profitability, segment customers, track regional performance and monthly trends, and present findings through an interactive management dashboard.

- Power Query data cleaning and transformation
- Calculated fields such as Profit Margin and Sales Category
- Pivot Tables for regional sales, category profitability, customer segmentation, and monthly trends
- Interactive Pivot Charts and slicers for Region, Segment, and Category
- Management dashboard with KPI cards for Total Sales, Total Profit, and Top Region

Tools Used Across Projects

Power BI	SQL / MySQL	Excel
Python	Microsoft Fabric	Power Query

If you need clean data, meaningful KPIs, SQL analysis, or an interactive dashboard, I'd be glad to discuss your project.
